1 Cells

1.1 Cell theory

All living things are made of cells, and every cell comes from an existing cell. All living things are made of cells, and every cell comes from an existing cell. All living things are made of cells, and every cell comes from an existing cell. All living things are made of cells, and every cell comes from an existing cell. All living things are made of cells, and every cell comes from an existing cell. All living things are made of cells, and every cell comes from an existing cell.

The cell membrane controls what enters and leaves the cell and keeps the inside stable. The cell membrane controls what enters and leaves the cell and keeps the inside stable. The cell membrane controls what enters and leaves the cell and keeps the inside stable. The cell membrane controls what enters and leaves the cell and keeps the inside stable. The cell membrane controls what enters and leaves the cell and keeps the inside stable. The cell membrane controls what enters and leaves the cell and keeps the inside stable. The cell membrane controls what enters and leaves the cell and keeps the inside stable.

1.2 Organelles

Mitochondria release energy from food in a process called cellular respiration. Mitochondria release energy from food in a process called cellular respiration. Mitochondria release energy from food in a process called cellular respiration. Mitochondria release energy from food in a process called cellular respiration. Mitochondria release energy from food in a process called cellular respiration. Mitochondria release energy from food in a process called cellular respiration. Mitochondria release energy from food in a process called cellular respiration. Mitochondria release energy from food in a process called cellular respiration. Mitochondria release energy from food in a process called cellular respiration. Mitochondria release energy from food in a process called cellular respiration.

2 Membranen

Die Natrium-Kalium-Pumpe transportiert drei Natriumionen nach außen und zwei Kaliumionen nach innen. Die Natrium-Kalium-Pumpe transportiert drei Natriumionen nach außen und zwei Kaliumionen nach innen. Die Natrium-Kalium-Pumpe transportiert drei Natriumionen nach außen und zwei Kaliumionen nach innen. Die Natrium-Kalium-Pumpe transportiert drei Natriumionen nach außen und zwei Kaliumionen nach innen.

3 الخلايا العصبية

تنقل الخلايا العصبية الإشارات الكهربائية في الجسم بسرعة كبيرة. تنقل الخلايا العصبية الإشارات الكهربائية في الجسم بسرعة كبيرة. تنقل الخلايا العصبية الإشارات الكهربائية في الجسم بسرعة كبيرة. تنقل الخلايا العصبية الإشارات الكهربائية في الجسم بسرعة كبيرة.
